

TimeKeeper

Time Accounting Application Software

TimeKeeper-PC is a full-featured time accounting application software. Timekeeper-PC has been designed to support open-ended connectivity on both input and output. It can be used with a variety of data collection terminals and is easily configured to export payroll data to any payroll system. TimeKeeper-PC's flexible rule-based architecture allows for easy customization to any payroll and financial tracking application. It's built-in support for multiple concurrent languages and diverse business cultures guarantees seamless integration in any environment.

"TimeTECH's software was customizable to our needs. We have saved approximately one million dollars. After having used TimeTECH's software for a while now, there are not many people that couldn't use a product like this."

Valley City Manufacturing

TimeKeeper

“Results Driven” Architect

- Concentrate on what you want to do rather than how to do it
- System performs all prerequisite steps needed to achieve a given result

Efficient Daily & Pay-Period Editing

- Receive immediate visual feedback on all edits without additional calculation steps
- See the effect of your changes as you make them!
- Completely customize the screen to suit your requirements (ex. Select which fields to display, order of display, which fields are read only etc.)

Enhanced Pay-Rules Functionality

- Supports multiple concurrent pay-periods: monthly, semi monthly, bi weekly, weekly
- Supports 5 additional user defined non-standard pay-periods
- Supports up to 99,999 pay rule classes (contracts), up to 9999 full and partial Absence Reasons/Pay categories
- Supports both single-shift and multi-shift schedules with Regular, Flexible (single and double core), Split, One Punch, and Daily Duration work modes
- Supports several overtime modes: Fixed, Flexible, Zoned, Flexible/Zoned, Weekly, Pay-Period etc. Use individual or in combination
- Supports several rounding modes: Simple Rounding, Duration Rounding, Zone Rounding, Point Rounding and California Rounding
- Handles breaks and meals for both punching and non-punching employees
- Supports cyclical work schedules for up to 365 days
- Unique user-defined extended calculation rules provide unparalleled power and flexibility (via sophisticated expression builders)

Automated Polling & Processing

- Support for predefined scheduled polling
- Specified polling intervals at present time or prefixed intervals
- System will automatically poll, process and update the database as often as required

Flexible Employee Profile Configuration

- Set up specific absence limits as well as multi-contract, multi-absence and multi-bade assignments
- Pre-schedule employees for vacations, absences or contract changes
- Define key fields as either numeric or alpha-numeric
- Customize your employee profile screen by grouping employee data into up to 20 separate TABS for convenient referencing
- Assign each TAB a specific heading and different set of selected fields
- Customize to individual user requirements with read/write/view only or hide functionality

Visual Pattern Tracking (VPT)

- Provide your managers with a powerful tool for monitoring employee attendance and absence patterns on an annual basis
- Track (for example) individual's sick leave, tardiness, early exit, overtime etc.

Built-in Report Generator

- Display only required information and perform custom calculation for specific data
- On screen column design (specify headings, content and format)
- Unlimited sorting and selection criteria
- Numerous formatting options (font, size, colour, etc.)
- Save and re-use of defined reports
- Output to screen, e-mail address, printer preview or html format file
- Use sophisticated expression builder to specify column content

Full System Security & Audit Trail Monitoring

- Define multiple menu configurations and assign them to individual users, modify text, hide, add and re-order menu options, as well as use multiple languages
- Provide users with selective access to specific plants, site, departments and employees
- Supports full audit trail reporting: who made which changes to whom, when and why (optionally require users to enter either predefined or free text justification reasons for edits)

Microsoft Office Integration

- Easily create custom spreadsheets, charts and graphs with user defined information and calculations via OLE linking to Excel
- Easily create custom letters and employee notifications with user defined information and calculations via OLE linking to Word

Payroll Transaction Generator

- Visually define both the format and contents of your payroll export data
- Create multiple record-types, each with its own unique format
- For each record-type; define multiple fields. Specify the length, position, formatting options and contents for each field
- Use sophisticated expression builder to specify field content
- Apply conditional transfers based on individual field value
- Automatic formatting and generation of report display information contained in exported file.

TK-SQL MS SQL Based Client/Server Version

- Ideal for organizations that operate in a distributed, multisite environment, but need/want a centralized time accounting/workforce management solution. Benefits of a client/server system is:
- Multi-tier structure database/business logic/user interface
- More efficient, providing better performance at lower “bandwidth” requirements
- Provides better security
- Centralized, more easily managed, data storage
